Shield® projection whiteboards

Semi-matte drywipe surface in 3 formats

The surface of these boards is top grade Japanese vitreous enamel steel guaranteed for 25 years. The semi-matte surface diffuses any 'hot spots' but obviously not to the extent of a totally matte projection screen cloth. Attractive Shield® contoured frame, powder coated black to add the professional touch. Balanced steel back to avoid distortion. Concealed corner fixings supplied. Refresh surface with a cleaning spray periodically.

NB Due to the heavy duty materials used in the construction of these steel boards, please ensure they are fixed to a solid wall.
